Meeting Minutes (5/2/18)

Discussed New Approach:

- Considering using 2 datasets: clothes dataset with obvious differences between samples, faces dataset with subtle difference between samples.
- Train 3-layer CNN on both sets and compare accuracies.
- Take subsamples of the original dataset to train the same network and compare the accuracies (performance).

Action Points in anticipation for Wednesday:

- Sebastian: Start cleaning the data in anticipation for Wednesday.
- Jonathon: Start formalising the report (see structure on MLP, CW3 PDF)
- Steve: Start reading into techniques for small data (deep feature extraction and transfer learning).
